### 08. Exposure controls/personal protection

#### 8.1 Exposure limit values

---

#### 8.2 Exposure controls

##### 8.2.1 Occupational exposure controls

Ensure good ventilation. This can be achieved by local suction or general air extraction.

If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn. Applies only if maximum permissible exposure values are listed here. Respiratory

protection: Normally not necessary. Hand protection: Recommended Rubber gloves (EN 374).

Protective PVC gloves (EN 374) Protective Neopren gloves (EN 374). Protective hand cream recommended.

Eye protection: Tight fitting protective goggles (EN 166) with side protection, with danger of projections.

Skin protection: Protective working garments (e.g. safety shoes EN 344, long-sleeved protective working garments)

Additional information on hand protection - No tests have been performed. Selection made for preparations

according to the best available knowledge and information on the ingredients. Selection of materials derived from

glove manufacturer's indications. Final selection of glove material must be made taking the breakthrough times,

permeation rates and degradation into account. Selection of a suitable glove depends not only on the material but

also on other quality characteristics and varies from manufacturer to manufacturer. In the case of preparations the

resistance of glove materials cannot be calculated in advance so it has to be tested before use. The exact

breakthrough time of the glove material can be requested from the protective glove manufacturer and must be

observed.
